Project 6

My project is a buzzfeed-type quiz that tells you which cartoon character you are (My Melody or Kuromi) based on the answers to three questions. The client inputs their name before taking the quiz, and after completing it, it will display their name and which character they are. There are also reset and rename buttons so the client can reset the quiz or change the name they originally gave.

AI Prompts Used:

- 2-3 rounds of debugging for /result
- 1 round of debugging for /rename
- How can I use app.delete in a quiz format?
